PROFILE

An 8th-cycle Software Engineering student at the Peruvian University of Applied Sciences (UPC), with professional experience in the development and maintenance of enterprise web applications and digital solutions. I have experience working with React, Next.js, ASP.NET Core, C#, Entity Framework, and SQL Server, as well as front-end development, back-end integration, databases, version control with Git, and development using agile methodologies. I have developed independent full-stack projects with real-time communication using WebRTC and Socket.IO. I am seeking remote opportunities as a Junior Software Engineer or Full-Stack Developer.

WORK EXPERIENCE

WYA Soluciones — Full-Stack Developer

May 2026 – Current | Part-time | Remote

- I developed and maintained enterprise web applications (sales, purchasing, and warehouse modules) using React, Next.js, ASP.NET Core, and C#, ensuring the system's continuous operation.
- I expanded the operational capacity of the ALICES system by designing and implementing key new features, including a channel management system and custom features for the Audit team.
- I optimized frontend performance and stability by resolving multiple state and UI/UX issues across five main modules, improving filter logic, pagination, and data validation.
- I reduced technical debt and improved the user experience by leading the redesign of core interfaces (Warehouse, Price List, Audit), creating an architecture of standardized and reusable components, tables, and filters.
- I modernized the DATASCAN system by implementing a global notification system and carrying out a fully responsive redesign of the navigation, thereby increasing cross-platform accessibility.
- I streamlined the deployment cycle by collaborating closely with the QA team to address issues, maintaining an organized workflow and resolving conflicts using Git.

TECnovedades — Web Developer

January 2026 – May 2026 | Remote

- I developed and deployed multiple B2B web solutions and dynamic landing pages from scratch for clients in the education, SSOMA, and foreign trade sectors, covering the entire development cycle.
- I built a comprehensive e-learning platform, developing everything from the course catalog to the authentication system, resulting in a seamless registration process.
- I facilitated the platform's monetization by successfully integrating local payment gateways (Yape/Plin), ensuring a secure and efficient transaction flow.
- I designed robust software architectures, connecting the front end (React, JavaScript) with back ends (Node.js, PHP) and relational databases (MySQL) for efficient data management.
- I increased the visibility and usability of the projects by applying responsive design principles and advanced SEO optimization techniques.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C#, Python, PHP, SQL, Dart (Flutter)

Frontend: React, Next.js, Tailwind CSS, HTML5, CSS3

Backend: ASP.NET Core, Node.js, NestJS, Express.js, REST APIs

Databases: SQL Server, PostgreSQL, MySQL, MariaDB, MongoDB, Supabase

Real-time and communication: WebRTC, Socket.IO, WebSockets

Architecture and development: DDD, Clean Architecture, SOLID, API Gateway, JWT, OAuth

Tools and Deployment: Git, GitHub, Figma, Docker, Linux, Vercel, Render

Methodologies: Scrum, User Stories, Sprints

Soft Skills: Leadership, communication, teamwork, creativity, time management, problem-solving

FEATURED PROJECTS

MeetMesh — Real-time video conferencing platform

Next.js - React - TypeScript - Tailwind CSS - Supabase - Socket.IO - WebRTC - WebGL

- I designed and developed the application from start to finish, including the front end, back end, authentication, storage, and user configuration using Supabase.
- I implemented real-time communication using Socket.IO and video conferencing features with WebRTC, including audio, video, screen sharing, reactions, hand-raising, and participant management.
- I developed profile and preferences features, including password change, language, and interface theme options, as well as virtual meeting management.
- I deployed the application using Vercel and managed the code using Git.

GitHub: <https://github.com/JhosepAC/videocall-app>

Signaling Server: <https://github.com/JhosepAC/meetmesh-signaling>

Find Your Movie (FyM) — Movie and TV Show Information Platform

Next.js - React - TypeScript - Tailwind CSS - TMDB API

- I designed and developed a platform for viewing information about movies and TV shows, including synopses, trailers, streaming platforms, episodes, and other content-related data.
- I integrated the TMDB API and developed search and content exploration features, optimizing user interaction and result retrieval.
- I implemented image optimizations and a responsive interface designed for smooth navigation and a seamless user experience.
- I deployed the application on Vercel and managed its development using Git.

EDUCATION

Software Engineering

Universidad Peruana de Ciencias Aplicadas (UPC)

2022 – Present | 8th Cycle

CERTIFICATIONS AND ADDITIONAL TRAINING

- Secure Software Development Lifecycle — Universidad del Bío-Bío, Chile — Summer School, 2025
- Scrum Fundamentals Certified — ScrumStudy, 2024
- The Complete Guide to MongoDB — Udemy, 2024
- Introduction to MongoDB — LearnMongoDB, 2024
- HTML, CSS, and JavaScript for Web Developers — Coursera, 2023
- Ethical Hacking — American School of Innovation, 2022
